

## Not all ground rods are created equally.

When safety and reliability matter, Kris-Tech has your back. Our magnesium ground rods are designed with effortless installation, unmatched quality, and unparalleled indestructibility in mind, and proudly made in the U.S.A.

Kris-Tech ground rods **meet and exceed** all water and sewer specification requirements, and we have inventory **in stock** for immediate shipping.

### You Spoke. We Listened.

We took your feedback to heart, using it to create the best ground rod on the market today.

#### Proprietary Wire-to-Ground Connection

No more faulty wire-to-rod connections. Once the ground wire is attached inside the rod, we seal it with a clear waterproof epoxy for long-term moisture and corrosion protection.

#### Ergonomic Cap

Flat caps can easily break if you hit them wrong. Our rounded, removeable cap won't break, even if you hit it off-center.

#### Waterproof Wire Connection

We route our ground rod wire through a flush-cut spiral groove underneath the cap and through a side entry point instead of running it over the top of the rod. This ensures the wire stays intact and limits faulty connections caused by excess moisture or corrosion.

#### Enhanced Pencil Tip Design

Most ground rods have an angular tip, making it tough to drive the rod straight into the ground. Our pencil tip design ensures every drive goes straight down and exactly where you want it to.

## Better Connections. Better Reliability. Better Results.

When reliability and performance matter, Kris-Tech products are up to the challenge. Scan the QR code to learn more about our ground rods and explore the rest of Kris-Tech's Total Tracer Wire Solution.
